

Value Lifecycle Platform

From approved value to proven value.

One workspace runs both roles — the value engineer who finds and quantifies value, and the realization manager who implements and proves it — with a first-class handover so nothing is lost between them.

THE PROBLEM

Organisations approve value they can't prove.

The study lives in one team's deck. The realization lives in another team's spreadsheet. The link between them is an email thread — so when the board asks whether the approved savings ever showed up, nobody can answer with a number.

Where value leaks

- Business case approved, then filed away
- No baseline to measure against
- Realization tracked in a different tool
- QBRs tell a story, not a reconciliation

Two roles. One workspace. A first-class handover.

1

Engineer the value

An 8-phase VE Job Plan: analyse functions, generate and score alternatives, and build a quantified business case.

2

Hand it over

One click turns accepted recommendations into a realization track — work packages, benefits and KPIs seeded from the study.

3

Realize & prove it

A 7-phase lifecycle drives adoption and measures actuals against baseline — realized value that traces back to the case.

HOW IT WORKS

The whole value lifecycle, guided end to end.

Value Engineer · 8-phase VE Job Plan

- Orientation & Information
- Function analysis + FAST
- Creative alternatives
- Evaluation (weighted scoring)
- Development & business case
- Presentation → accept/reject
- Handover

Realization Manager · 7-phase lifecycle

- Intake & alignment
- Baseline & measurement
- Implementation planning
- Adoption & change
- Execution & monitoring
- Value tracking & reporting
- Close-out

Every phase teaches, with exit criteria as a quality gate.

Find the value the classic way — then quantify it.

Function analysis + FAST

Verb-noun functions with cost vs worth; a value index flags where you overspend, drawn as a FAST logic tree.

Creative alternatives

Generate ways to deliver each function — type your own or brainstorm a spread (AI or template).

Evaluation matrix

Weighted criteria, 1–5 scoring, live rank; change a weight and everything re-ranks.

Recommendations

Promote shortlisted ideas to recommendations with technical and commercial detail.

Business case

Cost/benefit line items; ROI, payback, NPV & IRR recompute live; multi-currency (ZAR default).

Value handover pack

Baselines, KPI definitions and success criteria — what realization will be measured against.

A live business case, not a static spreadsheet.

Add cost and benefit line items — CAPEX, OPEX, one-off, recurring, benefits — and the finance engine recomputes the headline numbers instantly. Snapshot a version before a big edit; export a board-ready document to Word.

- ROI
- Payback
- NPV
- IRR
- Life-cycle cost

Computed, not typed

The finance engine is authoritative — every figure is derived from the line items, so the case is always internally consistent.

ZAR

default currency —
switchable per business case.

THE HANDOVER

One click turns approved value into owned work.

With at least one reviewer-accepted recommendation, Create Value Realization Track spins up a linked track and pre-populates it from the study. Nothing is re-keyed.

Work packages

from the accepted
recommendations

Benefits

from the expected-benefit
artifacts

KPI targets

from KPI artifacts, with
baselines

Back-link

track → source study, audit
logged

VALUE REALIZATION

Implement it, adopt it, and measure what lands.

Work packages

The implementation WBS — owners, due dates, status, dependencies.

Adoption & change

Who's impacted, training, comms and champions — recommendations become owned work.

KPI tracker

Record actuals each period against the baselines and targets carried from handover.

Benefits realization

Edit realized value per benefit; it rolls up to the track and the portfolio.

Value reports / QBR

Periodic and quarterly packs, exported to Word.

Close-out & lessons

Final realized value vs the original business case; lessons feed back to VE.

PROVE IT

Planned value vs realized value — in one view.

The portfolio dashboard puts the engineers' planned value beside the managers' realized value, broken down by industry and health. Realized value is measured against the baselines set at handover — so the number is a reconciliation, not a story.

Planned

VE

from business cases

Realized

VR

from KPI actuals

“Did we get the savings we approved?”

A single number, traceable all the way back to the study.

CUSTOMER SUCCESS

Proven value → a retained, growing relationship.

Realization proves one initiative and closes out; Customer Success is the continuous, per-account layer — and it references the account's studies and tracks, it never duplicates their value.

8-stage lifecycle

Handover → onboarding →
adoption → value → health →
governance → renewal →
expansion.

Health, proactively

A weighted scorecard rolls up to a
RAG band; attention signals flag
renewals, risk and detractors.

Renewal & growth

Stakeholder map, action log,
renewal and growth plans —
renewal becomes a non-event.

AI-assisted EBR

Generate an executive review
from the account's own data;
export an Account Success
Review.

The portfolio gains a Customer Success lens — engagement health, upcoming renewals and accounts needing attention.

CONFIGURABLE

Three industries out of the box — configuration, not code.

Construction & Infrastructure

Capital projects, life-cycle cost, buildability — value engineering's home turf.

Manufacturing & Product Dev

Should-cost, DFMA, tooling and unit-cost levers across a product line.

Enterprise Software / SaaS

Adoption, cost-to-serve and efficiency benefits for digital initiatives.

Each profile adds study types, cost drivers, value levers and default KPIs — add a new one in a data file and re-seed; the engine never changes.

Separation of duties, enforced — and multi-tenant.

Role-based access

Value Engineer, Realization Manager, Customer Success Manager, Reviewer, Viewer, Admin — capabilities enforced on the server, not just hidden in the UI.

A real governance gate

Only reviewer-accepted recommendations can be handed over — the line between proposed and committed value.

Multi-tenant & auditable

Self-serve workspaces isolated by organisation; version history and an audit log keep every number defensible.

THE PLATFORM

A complete platform, already built.

8·7·8

finance metrics

100%

tenant-isolated

What ships today:

- VE Job Plan — function analysis, FAST diagram, weighted evaluation matrix, inline editing throughout
- Business case — live finance engine (ROI/payback/NPV/IRR/LCC), multi-currency, version history, Word export
- The first-class VE→VR handover — accepted recommendations become a seeded realization track
- Realization lifecycle — work packages, adoption plan, KPI tracker, benefits realization, VRP/QBR export
- Customer Success — per-account engagements, 8-stage lifecycle, health scorecard, renewal/growth plans, AI-assisted EBRs
- Platform — portfolio & KPI dashboards (with a CS lens), real Auth.js RBAC, self-service workspaces + admin team management

WHO IT'S FOR

For the people who own the value — and have to prove it.

Value engineering teams

Run structured studies and build defensible business cases in one place.

Transformation & PMOs

A portfolio view of planned vs realized value across every initiative.

Finance & sponsors

The reconciliation the board asks for — approved value against proven value.

Approved value, and proven value — linked.

Where is that link weakest in your organisation today?

Value Lifecycle Platform
